

→ measurements & money is always float
 → float can adjust int values, but int cannot adjust float values in it
 → float in python can store upto 60 digits after decimal
 → for advanced mathematics, python has math module, which needs to be imported as
 "import math"

→ conditional statements in python:

- a. If statement
- b. If...else statement
- c. If..elif..else statement
 Switch case does not exist in python
 Say like 'else if', but always write as 'elif'
 At Most one block is executed in if..elif..else

→ Loops in python:

Loop has three parts: start		condition		step
Init value		stop		+/-k

Countup		Countdown
i=1 +k i<=n		i=n -k i>=0

- a. While loop
 - I. infinite while loop
 - II. while number division loop
 - III.
- b. For loop contd....
